

[MAC] Flashing OxygenOS 2.1.4 on OnePlus One

Please read the following instructions carefully before flashing your device. Flashing can be risky and may lead to data loss or bricked devices if done improperly. We highly recommend contacting our customer support if you feel uncomfortable performing the steps below.

** Instructions below assume you are currently running OxygenOS or COS12 and above. For other systems, please contact our customer support.

** We cannot guarantee the steps will work for rooted devices.

BEFORE FLASHING

- Please backup all your device data. Performing the steps below will wipe all of your data.
- Please make sure that your phone has more than 50% of Battery Life or is plugged into power supply.
- Please install Android File Transfer before proceeding with the below instructions.

INSTRUCTIONS

1. Download the [OxygenOS 2.1.4](#) and A001_O2_Patch.zip file for your OnePlus One device.
2. Extract Patch.zip and open the extracted folder.
3. Now Power Off your OnePlus One and put it in Fastboot Mode by **disconnecting** the USB cable and then Press and Hold **Power and Volume Up** button together.
4. Once in Fastboot Mode, connect your phone to your MAC.
5. Now open terminal on your mac
6. Now drag the "All-in-One.sh" from patch folder to your Mac terminal and hit enter.
7. Enter your root password and program should get executed on your Mac.
8. Select 1 to check the connection status. You should see your device ID and fastboot written on your Mac screen for few seconds.
9. Now enter 2 in the same program and your device may reboot, if it does not reboot please skip to step 11 else go to step 10.
10. Skip the setup process on your phone.
11. Press 5 on the command window and hit enter and your phone should boot into your existing OS.
12. Copy the OxygenOS zip file to your phone which you downloaded separately from the website.
13. Now power off your phone, disconnect the USB cable and put the device in Fastboot mode again (Power + Volume UP).
14. Now connect the phone to your computer and Enter 3 in the menu option of the program.
15. Now enter 4 and you will enter into OnePlus recovery, if not then press and hold Volume Down + Power Button
16. Inside OnePlus Recovery
 - Select the language of your choice
 - Select "Wipe data and cache"
 - Select "Wipe data and cache" again
 - Select "Yes"

- Select “done”
- Select “Install from local”
- Select the OxygenOS zip that you downloaded and copied before.
- Select “Yes”
- Click “Install”
- Select “Yes”
- Select “Reboot”
- Select “Reboot” again

Congratulations, Your phone is on OxygenOS now :)
